**MLI**

– tailored upgrade programmes  
for the Bv 206

## A unique way of restoring used vehicles to nearly-new

MLI (Mid Life Improvement) is a tried and tested upgrade programme for the Bv 206 tracked vehicle developed in collaboration with BAE Systems Hägglunds. The programme provides customers with a vast range of options covering everything from the scope of the upgrade to the tracked vehicle's final design and use.

### MLI provides high performance and reliability

Generally customers approach us with a tracked vehicle that they have acquired themselves, but it is also possible to obtain an upgrade including a Bv 206. The highest level of upgrade provides a vehicle in new condition with a one-year/3000-km warranty at a highly competitive price.

The MLI-programme contains:

- New engine: STEYR, 6-cylinder turbocharged diesel.
- New gear box: MERCEDES 7-step automatic.
- New intercooler.
- New water cooling system.
- New cooling fan.
- New gear oil cooling system.
- New throttle control.
- New gearshift control.
- New vehicle exhaust system.
- New fuel system.
- New air intake system.
- New electrical system.
- New diesel heater.
- Front car body modification

The new 6-cylinder Steyr engine is both fuel-efficient and reliable.

## Tailored add-on units optimised for particular functions

A significant component of our service is the manufacture of customised add-on units. A wide range is available, including auxiliary hydraulic systems, load changers, flat-beds, cranes and modules such as ambulance modules, rest cabins or rescue modules. We can build whatever you need to fulfil your requirements and optimise your operations.

Our customers include organisations in many sectors, including energy, healthcare, rescue services and research.

The final product is not just a tailored vehicle with optimum durability, accessibility, low ground pressure and a long operating life. It also assures a high level of safety as we take full responsibility and provide complete documentation as well as guaranteed access to servicing and spare parts. Plus of course it includes access to our broad range of competence and three decades of experience.

### Did you know that...

- ... at STV (previously a part of Berco) we have been supplying customised tracked vehicles and add-on units since 1986
- ... we have a long history of close collaboration with BAE Systems Hägglunds
- ... we have supplied tracked vehicles to every corner of the world, including a number of polar expeditions
- ... the secret to our high quality mainly lies in our sound design skills, careful choice of components and meticulous production controls
- ... our products are environmentally friendly thanks to excellent fuel economy and low ground pressure
- ... we also supply brand new TL6 tracked vehicles.
